

Would you like to save money and reduce your carbon footprint?

The University of Chester has kindly agreed to work in partnership with the Tarvin Environment Group to deliver the Sustainable Future Project. The project will help participants assess and reduce the carbon footprint and energy consumption of their household.

Students from the University will assess a household's carbon footprint and produce an individual plan for each household based upon the findings.

Participants will be asked to implement changes over the coming year in an attempt to reduce energy consumption and the household's carbon footprint.

After 12 months the findings will be shared with the community and It is hoped that the Sustainable Future project will demonstrate that incremental changes in behaviour can collectively make a real difference to our carbon footprint and inspire others to take action.

By joining you will be given help and support over 12 months to reduce your fuel bills and your carbon emissions.
